

## 1.4 Two's Complement Practise Questions

1. Two's complement can be used to represent negative binary numbers.

- i. Convert the denary number -124 into an 8-bit two's complement binary number.

---

---

---

..... [1]

- ii. State **one** other way to represent negative binary numbers.

---

..... [1]

2. Using the binary value 1001 1101, convert this into:

- i. A positive denary number.

---

..... [1]

- ii. A negative denary number using two's complement.

---

..... [1]

3. Negative binary values can be represented using either sign and magnitude or two's complement.

- i. Convert the denary number **-107** to an 8-bit binary number using two's complement.

---

---

---

..... [1]

## 1.4 Two's Complement Practise Questions

4.

- i. Complete this binary subtraction. Both numbers are 8-bit integer values represented using two's complement.

Show the result in the same format and show your working.

0110 1101 –  
0011 0100

---

---

---

---

---

[3]

5(a).

- i. Convert the denary number 97 into an **8-bit** binary number.

---

---

---

[1]

- ii. Convert the denary number –97 into an **8-bit** binary number using two's complement.

---

---

---

[1]

(b). State **one** advantage of using two's complement instead of sign and magnitude.

---

---

---

[2]

## 1.4 Two's Complement Practise Questions

6.

- i. Convert the denary number  $-119$  to an 8-bit binary number with two's complement representation.

---

---

---

[1]

7. Convert the two's complement binary number  $10011011$  into a denary number.

---

---

---

[1]

8(a).

- i. Convert the denary number  $-44$  to an 8-bit binary number with two's complement representation.

---

---

---

[1]

9. Show a representation of denary  $-119$  in 8-bits using:

- i. Two's Complement

---

---

---

[1]

Show your working.

[4].

**[1]**

[1]

You must show your working.

4

## 1.4 Two's Complement Practise Questions

[2]

- ii. Explain why your answer to the addition sum is wrong.

[2]

**12.** Demonstrate subtraction in binary using 8-bit two's complement using the equivalent of the denary calculation  $47 - 23$ . You must show all working.

[4]

**13.** Using two's complement convert the denary number  $-43$  into an 8 bit binary number. You must show your working.

[2]

**END OF QUESTION PAPER**

# Mark scheme

Question			Answer/Indicative content	Marks	Guidance
1		i	1000 0100	1	
		ii	Sign and magnitude	1	
			<b>Total</b>	<b>2</b>	
2		i	157	1	
		ii	-99	1	
			<b>Total</b>	<b>2</b>	
3		i	<ul style="list-style-type: none"> <li>1110 1011</li> </ul>	1	
		ii	<ul style="list-style-type: none"> <li>Calculations are more easily <b>performed</b> on two's complement</li> <li>Two's complement allows for a (negligible) larger range of numbers to be stored / by example</li> <li>No additional hardware is required in two's complement / Addition and subtraction are carried out using only an adder</li> <li>Two's complement has only one representation for 0</li> </ul>	1	
			<b>Total</b>	<b>2</b>	
4		i	0011 1001 <ul style="list-style-type: none"> <li>One mark for correct left nibble</li> <li>One mark for correct right nibble</li> <li>One mark for working clearly shown</li> </ul>	3	
			<b>Total</b>	<b>5</b>	
5	a	i	<ul style="list-style-type: none"> <li>0110 0001</li> </ul>	1	
		ii	<ul style="list-style-type: none"> <li>1001 1111</li> </ul>	1	

## 1.4 Two's Complement Practise Questions

	b		<ul style="list-style-type: none"> <li>– Can be easily used in binary arithmetic or</li> <li>– Increased range of numbers available</li> </ul>	2	
			<b>Total</b>	<b>4</b>	
6		i	1000 1001	1	
			<b>Total</b>	<b>1</b>	
7			–101	1 AO2.1 (1)	
			<b>Total</b>	<b>1</b>	
8		i	11010100	1	
			<b>Total</b>	<b>1</b>	
9		i	1000 1001	1	
			<b>Total</b>	<b>1</b>	
10					
			<ul style="list-style-type: none"> <li>• 43 in binary 0010 1011 (1)</li> <li>• –43 2's complement 11010101 (may be two steps to get this, negate bits plus 1)</li> <li>• 11010101</li> </ul>	3	
			<b>Total</b>	<b>1</b>
